                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GENERAL INFORMATION:

APPLICANT: Jung, Eun-Kyung
APPLICANT: Jung, Soo I1

APPLICANT: Park, Doo-Hong
APPLICANT: Chung, Soo I1

TITLE OF INVENTION: RECOMBINANT EXPRESSION VECTOR OF HUMAN PARATHYROID HORMONE
TITLE REFERENCE: 0136/06626
CURRENT APPLICATION NUMBER: US/09/463,282D
CURRENT FILING DATE: 2000-01-20
PRIOR APPLICATION NUMBER: PCT/KR98/00146
PRIOR APPLICATION NUMBER: PCT/KR98/00146
PRIOR APPLICATION NUMBER: WR 1997-35230
PRIOR FILING DATE: 1997-07-27
NUMBER OF SEQ ID NOS: 26
              Sequence 3, Application US/08468275
Patent No. 5747453

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Compounds of the structure or formula S-(L)_n-B, R_1-S-(L)_n-R or S-(L)_n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing CAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or inhalation unlike the large mative PTH or PTH-rP which avoids the need for regular injections to treat osteoporosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) -R, are new, S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (wher n is a positive integer 1-10 (preferably 4); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is tipty 1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing CA in a mammalian cell having PTH-1 receptors, or screening for a peptide non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTHrP which avoids the need for treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4); B is a C-terminal binding portion of PTH(134) or a PTH-related protein (PTH-rP) (1-34); R I is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTH-P which avoids the need for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New compound comprising an amino terminal signaling functional domain linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Compounds of the structure or formula S-(L)_n-B, R_1-S-(L)_n-R or S-(L)_n-R, are new S is an amino terminal signaling functional domain of

CC The present sequence, which encodes a linker and the parathyroid hormone CC 1-37 (PTH 1-37) peptide with codon usage optimised for E. coli, was CC ligated to the 2.9 kb NheI-HindIII fragment of pSAM-CCRE, which contains CC the Met (13-139) streptavidin (SA) sequence, to give pSA-EK-PTH. pSA-EK-CC PTH and the LacIq repressor plasmid pUBS500 were used to transform E. CC coli K12 RM82. The transformants were grown, with IPTG induction, in CC medium containing kanamycin and amplicilin. Cells were harvested, lysed CC and isolated inclusion bodies solubilised in guanidine hydrochloride, and CC renatured by dilution in pH 7 phosphate buffer. The solution was CC clarified and the supernatant concentrated and purified on a column of CC mmobbilised iminobiotin. The purified material was incubated with CC fragment removal on an iminobiotin column followed by chromatography on a CC fractogel and reverse phase HPLC. The endoproteinase LysC cleaves the CC fusion protein rapidly and completely, exclusively at the Lys residue in CC the linker, i.e. not at Lys residues in SA. (Updated on 25-MAR-2003 to CC correct pR field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method of increasing the serum half-CC life of a biologically active agent involves fusing the biologically CC active agent to transthyretin (TTR) or a TTR variant. The method is useful for increasing the serum half-life of a biologically active agent. CC Homogenous compositions comprising thrombopoietin (TPO) mimetic peptide CC (TMP) is useful for treating thrombocytopaenia, megakaryocyte/platelet CC deficiency/thrombocytopaenia, dispathic thrombocytopaenia, megakaryocyte/platelet CC deficiency famound; syndrome, vitamin B12 deficiency, folic acid CC splenomegally, Fanconi's syndrome, vitamin B12 deficiency, folic acid CC splenomegally, Fanconi's syndrome, vitamin B12 deficiency, folic acid CC deficiency, May-Hegglin anomally, Wiskott-Aldrich syndrome and paroxysmal CC nocturnal haemoglobinuria. Homogenous compositions comprising glucagon-CC like paptide 1 (CLP-1) is useful for treating non-insulin dependent CC diabetes. TMP compounds are useful in stimulating certain cell types CC other than megakaryocyte, which expresses Mp1 receptor and in maintaining CC the viability or storage life of platelets and related cells. The present CC sequence is human parathyroid hormone (PTH)-TTR variant fusion DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a method of increasing the serum half-
CC life of a biologically active agent involves fusing the biologically
CC active agent to transthyretin (TTR) or a TTR variant. The method is
CC useful for increasing the serum half-life of a biologically active agent
CC (Homogenous compositions comprising thrombocytopaenia, megakaryocyte/platelet
CC (TMP) is useful for treating thrombocytopaenia, megakaryocyte/platelet
CC (CTMP) is useful for treating thrombocytopaenia, megakaryocyte/platelet
CC (CTMP) is useful for treating thrombocytopaenia, megakaryocyte/platelet
CC (CTMP) is useful for treating thrombocytopaenia, metastatic tumours
CC (CTMP) in thrombocytopaenia, systemic lupus erythematosus,
CC splenomegaly, Fancon's syndrome, vitamin B12 deficiency, folic acid
CC deficiency, May-Hegglin anomaly, Wiskott-Aldrich syndrome and paroxysmal
CC deficiency, May-Hegglin anomaly, Wiskott-Aldrich syndrome and paroxysmal
CC curnal haemoglobinuria. Homogenous compositions comprising glucagon-
CC like peptide 1 (GLP-1) is useful for treating non-insulin dependent
CC diabetes. TMP compounds are useful in stimulating certain cell types
CC ther than megakaryocyte, which expresses Mp1 receptor and in maintaining
CC the viability or storage life of platelets and related cells. The present
CC sequence is human parathyroid hormone (PTH)-TTR variant fusion DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               biologically active agent comprising fusing the agent to transthyretin (TTR) or a TTR variant. The invention also relates to a homogenous preparation of a TTR-biologically active agent fusion, a TTR variant-biologically active agent fusion, a TTR variant-biologically active agent fusion, a TTR variant-biologically active agent fusion and a PEG-TTR variant-biologically active agent fusion and a peg-TTR variant-biologically active agent fusion, optionally in a pharmaceutically acceptable diluent, carrier or adjuvant. The method is used to increase the serum half-life of a biologically active agent, e.g. a protein or a peptide. A preparation comprising a TPO mimetic peptide (TMP) is used to treat thrombocytopenia, aplastic anaemia and metastatic tumours. This sequence represents cDNA encoding a human mutant TTR polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expression cassette; high yield polypeptide production; tandem polypeptide; inclusion body; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            treating thrombocytopenia, comprises fusing the agent to transthyretin a variant of it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ADG93179 standard; DNA; 102

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel expression cassette and methods for high yield production of polypeptides. The cassette comprises an operably linked nucleic acid sequence, where the expression of the cassette produces a tandem polypeptide that forms an inclusion body when expressed in a cell. The expression cassette is useful for producing peptide and polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present sequence is that of a DNA sequence which encodes a polypeptide which may be produced using the expression cassette of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New expression cassette comprising an operably linked nucleic acid sequence, useful for producing a tandem polypeptide that forms an inclusion body when expressed in a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2004-035128/03.
P-PSDB; ADG93159.
The invention comprises an expression cassette which produces a tandem polypeptide that form an inclusion body when expressed in a cell. The expression cassette of the invention is useful for producing a peptide
                                                                                                                                                                                                                                                                                          New expression cassette comprising an operably linked nucleic acid sequence, useful for producing a tandem polypeptide that forms an inclusion body when expressed in a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    06-MAY-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; SEQ ID NO 60; 157pp; English.
